

DFX Doorway Foamers

Add an additional layer of pathogen protection to critical control areas in your food plant with a DFX Doorway Foamer. These foamers lay down a thick carpet of sanitizing foam in doorways, dock doors and other ingress and egress areas where there is a potential risk of cross-contamination from foot traffic, forklift wheels, carts and other transportation equipment.

Units can be used with pre-mixed solution or concentrate, and come in one, two and three nozzle configurations to match your specific application and need.
