

Which hand do you want on your production line?

**CFUs remaining after using
a 4-Log hand sanitizer
(99.99% effective)**

**CFUs remaining after using
a 6-Log hand sanitizer
(99.9999% effective)**

The graphic above illustrates the difference in CFU (colony forming unit) reduction between a hand sanitizer with a 4-Log reduction (99.99%) and Alpet® E3 Plus Hand Sanitizer Spray which has a 6-Log reduction (99.9999%). Now, which hand do you want on your production line? For a trial sample of Alpet E3 Plus contact your account representative, or call Best Sanitizers at 888-225-3267 x126.

Alpet® E3 Plus Hand Sanitizer Spray has a 6-Log reduction and is 99.9999% effective in killing 26 pathogens.

Alpet E3 Plus is 100 times more effective at reducing CFUs (colony forming units) than a 4-Log hand sanitizer with a kill claim of only 99.99%. As an example, if you start with a contaminated area containing 1,000,000 CFUs, Alpet E3 Plus will reduce the number of CFUs down to one, whereas the product with a 4-Log reduction will only reduce that initial 1,000,000 CFUs down to 100. Meaning, there are 100 CFUs still remaining that can multiply every 20 minutes and potentially cause a real problem. For more information on Log reduction, visit www.bestsanitizers.com.

Alpet E3 Plus Hand Sanitizer Spray is delivered as an atomized spray for more effective coverage. Leaves hands feeling soft and silky.

Alpet E3 Plus is delivered as an atomized spray which saturates fingernails, cuticles, cracks and crevices of the hands and fingers where pathogens hide. Alpet E3 Plus is formulated with emollients to keep hands soft and healthy, even with repeated use, leaving employee's hands feeling soft and silky. For a trial sample, contact your account representative, or call Best Sanitizers at 888-225-3267 x126
