## Alpet® D2 Surface Sanitizer

BEST SANITIZERS INC.  
**ALPET**  
Surface Sanitizer **D2**

### What our customers are saying:

*"We use Alpet D2 quart sprayer and wipes in our processing areas, on our lines, tables and conveyors. **Alpet D2 is simply the best product I have used in these areas.**"*

Large Fresh Vegetable Processor

*"Alpet D2 surface sanitizer / disinfectant is used externally in our dry production areas and is standard for all our RTE areas. We also use Alpet D2 on gloves, control panels and selected equipment. We purchase Alpet D2 in 50 gallon drums and dispense from both the quart trigger sprayer and Best's wiping system. I am thrilled with the results. It is quick and convenient to use and dries rapidly."*

Doug Craven, Corporate Sanitarian  
Hormel Foods Corporation

*"Alpet D2 is used in a variety of ways here. **As a general rule, we use it wherever water cannot be used or where we want to prevent moisture** (electronically). There are basically two methods of cleaning, which are wash down or dry clean. All food processing equipment should be cleanable, but isn't, and dry cleaning just does not work well enough. Water and chemical applications work best. **Alpet D2 gives us another option. We use it on water sensitive equipment such as motors, control panels, proximity switches, inside electrical panels, labelers, etc; all the items that just never look clean from dry cleaning.** The alcohol evaporates, leaving surfaces looking clean, sanitized and moisture free, but is applied in wet form and really does a great job at removing oil, grease, egg or many other associated soil build-ups. We have also adapted it for use in our peanut butter operation, where any moisture can cause microbial problems. Alpet D2 allows us to remove oily peanut butter build up on a regular basis and sanitizes this equipment. Most recently, we were in need of obtaining a solid method to sanitizing utensils, at batching and filling stations, such as thermometers and spatulas. Small bath-type sanitizing stations require constant refilling and monitoring, in order to provide adequate sanitizing during processing operations, and most of the time have the potential of becoming microorganism harborage sites. **We have been using Alpet D2 for a few years now and it has become one of our most widely used chemicals. We have adapted to using it in so many ways. It has been one of the items used to bring our sanitation program to the next level.**"*

Matthew C. Rosiek, Sanitation Superintendent
