ALPET D2 Surface Sanitizer

To Whom It May Concern:

Best Sanitizers, Inc. recently underwent a Data Call In from EPA on the ALPET D2. We seized the opportunity to perform additional testing on the product. As a result, Best is able to augment the original claims of the sanitizer.

One of the new claims involves Cleaning. We can now say that ALPET D2 is recommended for use as a cleaner on hard non-porous food contact and non-food contact surfaces. For the specific list, please review the master label. Gross food particles and soil should be removed from the surfaces. ALPET D2 is then applied, without dilution, to the surface, wiped cleaned, and allowed to dry. A water rinse after applying the product is permissible in wet environments if necessary, to aid in the cleaning process.

ALPET D2 is an effective Surface Sanitizer and will not adulterate food products under the intended conditions of use as outlined on the product label. Best Sanitizers, Inc. certifies that ALPET D2 Surface Sanitizer complies with earlier USDA guidelines for D2 Sanitizers for all surfaces not always requiring a rinse, for use as a sanitizer in food processing and food handling areas in official establishments operating under the Federal Meat and Poultry Inspection Program. It has been certified by NSF as a D2 Sanitizer not always requiring a rinse, the number is 126509.

If you have any questions, or require additional information regarding this correspondence, please call me at 859.485.5075

Sincerely,

A handwritten signature in black ink that reads "Tarah Justice".
